# TRENCHLESS REHABILITATION TECHNOLOGIES FOR UNDERGROUND CONDUITS

- CIPP Ultraviolet (UV) Technology
- PVC FOLD & FORM Technology
- SPRAYING Technology
  (Drinking Water- Pressure Pipes)
- HOSE LINER Technology
  (Drinking Water- Pressure Pipes)

KANALTEK
NO DIG TECHNOLOGIES

# FOLD & FORM TECHNOLOGY

- Leading Organization in TrenchlessTechnologies
- Pipe Rehabilitation since 2004
- Experienced and trained staff
- State-of-the-art machinery and equipment
- 850,000 meters of pipe rehabilitation

## DESCRIPTION OF EQUIPMENT

### Product Reel

PVC Liner
6" – 16" (150mm – 400mm)

### Conditioning Trailer/ A-Frame

Product is heated in the conditioning trailer/A-frame prior to pulling into the existing host pipe.

### Boiler

Used to generate steam required for the conditioning and processing phases of the installation. A boiler should be housed in a trailer for mobility. It should also include a water reservoir and water feed pump.

## DESCRIPTION OF EQUIPMENT

**REEL DIMENSIONS**

| Pipe size, in. (DN) | COIL LENGTH (meter per coil) |
|---|---|
| 6" DN150 | 275 m |
| 8" DN200 | 250 m |
| 9" DN225 | 225 m |
| 10" DN250 | 185 m |
| 12" DN300 | 155 m |
| 16" DN400 | 155 m |

# FOLD & FORM TECHNOLOGY

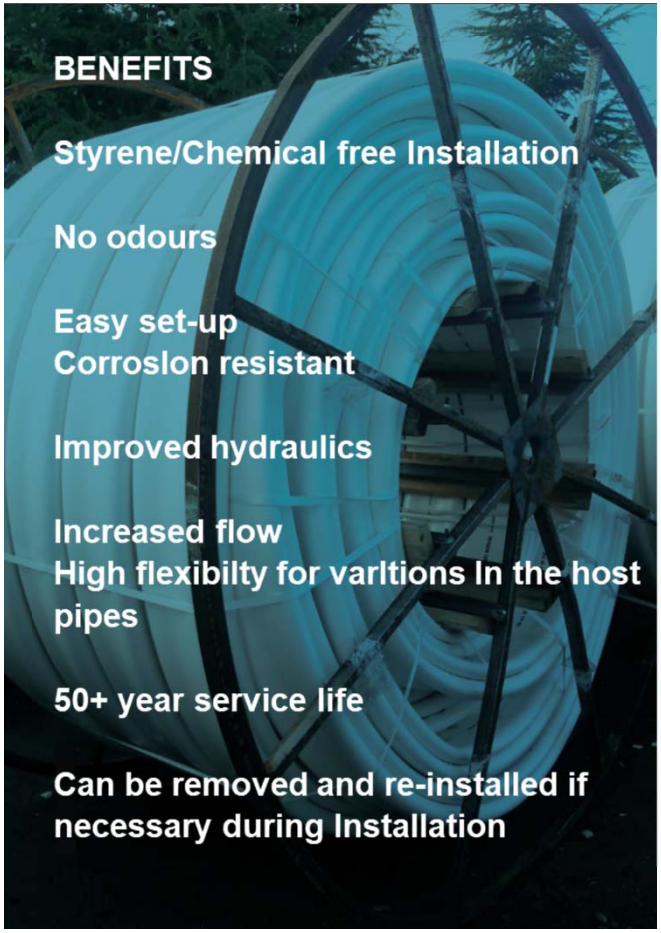

➢ **Pre-Heating**
Folded PVC liner materials where was wrapped is inserted heater for preheating process.

➢ **Pipe Liner Insertion**
Softened PVC liner after preheating stage is pull into the host pipe by means of a steel cable strung through the host pipe from a winch located at the downstream manhole.

➢ **Processing**
Heat equipment is delivered steam through the lining section to uniformly raise the temperature of the materials to effect forming of the liner pipe.

➢ **Cooling**
After forming the liner is cooled using compressed air or a mixture of compressed air and water.

**Application range DN150-DN400**
